GAME-CHANGING SIGINT SOLUTIONS

- LOWER OPERATIONAL COST
- UNIQUE COLLECTION STRATEGY
- STRATEGIC OR MOBILE
- MANPOWER EFFICIENCY
- OPERATE LOCAL OR REMOTE
- DIGITAL WIDEBAND RECORDING

There has been a long time requirement to improve the way tactical and routine operations collect and prosecute targets. Current strategies can be ineffective or inefficient. With the INTRUDER System, operators will be able to see as well as hear, dramatically improving acquisition of targets at a glance.

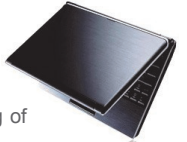

flexible SIGINT solutions for your collection needs

COLLECTION FLEXIBILITY

INTRUDER can be used as an extremely small but potent collection system for tactical deployment by one or two individuals or deployed as a leave behind system that can be accessed remotely from more secure locations via the Internet. INTRUDER enhancements being developed now include a DF capability, a scanning digital drop receiver, expansion into the VHF/UHF bands, and more.

INTRUDER BASIC COLLECT

Includes software, computer, high quality SDR equipment for wideband prosecution of voice and analog decoding of basic non-voice signals in the HF spectrum (2-30 MHz) and "look back" recording for later playback.

INTRUDER ADVANCED COLLECT & DECODE

Will include all collection and recording features and the ability to digitally decode signals such as BPSK, MFSK, RTTY and many more. Custom decoders can also be created for your specific target and collection needs. Collectively these features will assist in preventing "technical surprise" thus keeping you abreast of emerging communications developments.

Providing World Class Technical Services

Global installations Africa, Asia, Australia/Oceania, Canada, Greenland, Iceland, Caribbean Islands, Europe, Middle East, South and Central America and The United States

INTRUDER is the future of target collection.

Small package, small footprint, low cost, total mobility or fixed site installations.

Do you want to **SEE** up to 1.8Mhz of RF spectrum and prosecute it or only **LISTEN** to 3 KHz?

This?

or This?

Along with TSS Intruder and TSS RF Cloud, Telecommunication Support Services, Inc. (TSS) provides world-class technical services around the world for all segments of the Telecommunication and Broadband industries. This includes satellite, wireless, broadband, and radar as well as professional services such as field installation and testing, erecting and commissioning earth stations, broadband headends, wireless and radar networks, and installing towers, plant cabling, foundations and shelters.

TSS also delivers integrated project support including design, installation, operations and maintenance, warehousing and logistical support, training, technical response center (TRC), network operations center (NOC) and teleport services.
